

# The OnPar Report

“Technology Tips to Transform Your Business”

## OnPar Technologies Participated as a Sponsor at the REX Hospital Open

OnPar Technologies was one of the newest sponsors to take part in the REX Hospital Open Pro-Am on Wednesday May 30, 2018 at TPC Wakefield Plantation in Raleigh. We had a tent on the 18th hole and were giving out freebies to golfers throughout the day!

All the tournament proceeds supported the Neuroscience Service Line Expansion at UNC REX Healthcare. Raleigh is located in what is considered the buckle of the stroke belt and demand for more specialized neuroscience services is increasing. Tournament funding went to support state-of-the-art facilities and 24/7 care provided by speciality trained physicians, nurses and ancillary staff. These investments provide the community the specialized care needed when confronted with stroke, aneurysms, traumatic brain injury, epilepsy and other neurological diseases. OnPar Technologies is honored to be a part of an event that supports the local community with its efforts.

# Join Our Free June Webinar: Modernizing Your Business Communications With Microsoft Teams

Everything You Need To Get Started Using Microsoft Teams In Our Webinar On June 21, 2018 at 1:00 PM EST

Microsoft Teams is an application within the Microsoft Suite that was created to bring together people, conversations, content, and tools to allow collaboration to achieve more. It is integrated with other familiar Office applications and is built within the Office 365 global secure cloud.

## Why Should You attend?

Microsoft Teams is the new chat-based workspace for Office 365. Microsoft Teams is an entirely new experience that brings together people, conversations and content (along with the tools that teams need) so they can easily collaborate to achieve more. It is truly a hub for teamwork providing a single location that brings together everything that a team needs; chats, meetings, calls, files, and other tools. It's naturally integrated with the familiar Office applications and is built from the ground up on the Office 365 global, secure cloud.

## What You Will Learn:

Microsoft Teams delivers on four core promises to create a digital workspace for high performing teams; communication, collaboration, customization and confidence. Join our June webinar to see how Microsoft Teams can help your organization enable new ways of working, accelerate decision making, and drive digital transformation to modernize business processes while increasing productivity.

## Experience the following with Teams:

- Threaded Chat: Teams provides a modern conversation experience through threaded chats designed to keep everyone engaged. See content and chat history anytime in team or private chat. You also have the ability to schedule small group or team meetings.
- A hub for teamwork: Teams integrates with Word, Excel, PowerPoint, SharePoint, OneNote, Planner, Power BI, and Delve. This cross-application service makes it easy for people to move easily between collaboration tools.
- Customization: Microsoft created teams knowing that each team is uniquely different. Therefore, there is room to customize your team dependent on the team's needs.
- Security: Teams provides the enterprise security and compliance features you expect from Office 365, including eDiscovery and legal hold for channels, chats and files. Data is encrypted in transit and supports key compliance standards.

## Our Featured Case Study: The Get Movin' Crew

### How Office 365 Brought An Organization Together Under the Small Umbrella

The Get Movin' Crew LLC is a service-based company that organizes and implements exciting and successful school fundraisers through Fun Runs, Walk-A-Thons, Read-A-Thons, Dance-A-Thons, Spell-A-Thons, or any A-Thon. In business since 2007, The Get Movin' Crew helps schools, PTA's, PTO's and other non-profit organizations raise money through educational and health/wellness-based fundraisers. Their staff of 18 aims to help teach health and wellness and increase educational value through these fundraising events.

The Get Movin' Crew started helping schools in their home state of Michigan and expanded to a nationwide organization with online services in 2012. As their services began to expand, they realized the need to consolidate and improve their software and application services into a single platform to encourage ease of use and improve productivity.

Using a mixture of services (Host Monster for email services, DropBox for document storage, and personal cell phones for phone service), The Get Movin' Crew began their six-month search for an affordable solution that would allow them to house their technology solutions under one umbrella and decrease costs.

They were experiencing limited space for document storage in DropBox as well as a problem with duplicate documents as DropBox did not allow version history. Their search led them to their partnership with OnPar Technologies. They chose OnPar Technologies because of OnPar's knowledge of Microsoft Office 365, a detailed and well-outlined proposal, and the reasonable implementation costs for OnPar's services.

#### Business Challenge:

- Limited storage in DropBox
- Difficulty sharing and collaborating on company documents
- Using personal cell phones as a phone system
- Inability to share calendars in Host Monster

#### Solutions

- Migrated e-mail, calendars, and contacts to Office 365 Hosted Exchange
- Setup and customized a SharePoint Online site for document organization and storage
- Migrated data from DropBox into SharePoint Online
- Implemented Office 365 Phone system and setup auto-attendant and call routing

#### Results

- Simplified and easy to use application/software
- Increased productivity
- Better platform for document collaboration and data storage
- Ability to share calendars and secure meeting times
- Organized call routing and better call handling

## Worried About Your Company's Digital Credentials?

28,500. That's the average number of data records per company, including credentials, that are compromised during a data breach.

Our Dark Web ID Credential Monitoring Detects compromised credentials in real-time on the Dark Web and notifies you immediately when these critical assets are compromised, before they can be used for identity theft, data breaches, or other crime. Digital credentials such as usernames and passwords connect you and your employees to critical business applications, as well as online services. Unfortunately, criminals know this — and that's why digital credentials are among the most valuable assets found on the Dark Web.

Cybersecurity doesn't have to be too overwhelming, expensive or complicated. The first step to protecting your business is understanding your risk.
